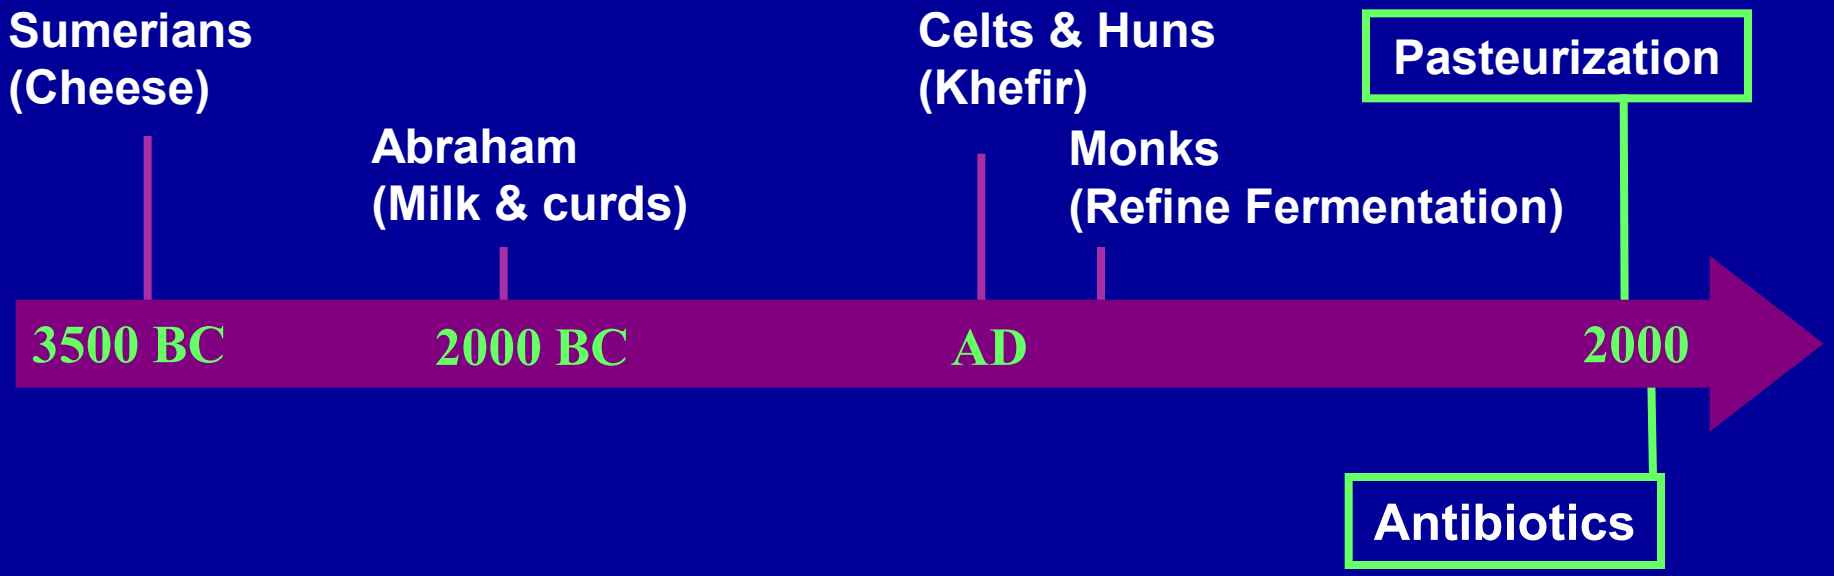
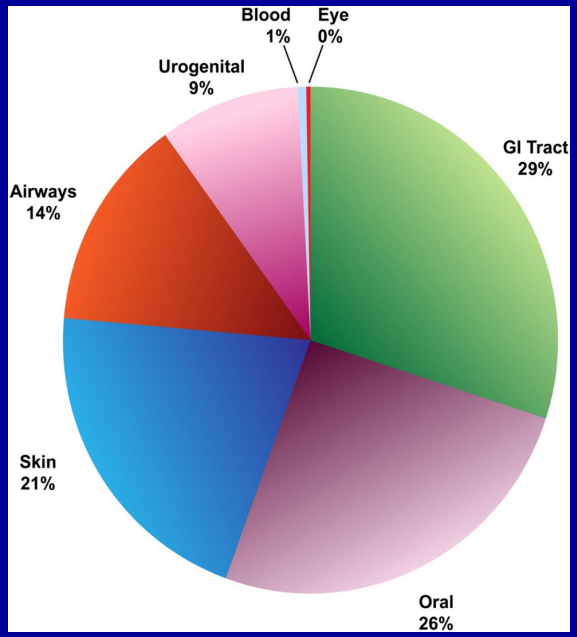
Ingestion of Bacteria



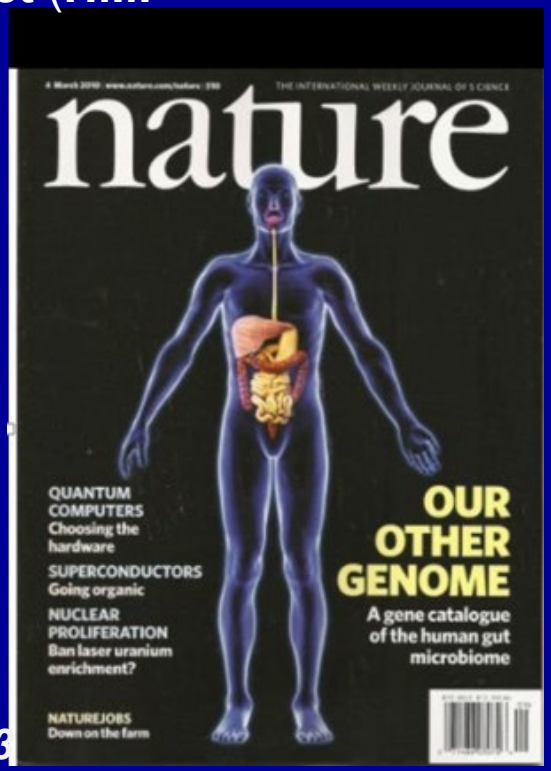
In the last 100 years, we drastically changed our ingestion of microbes and our microbial environment.

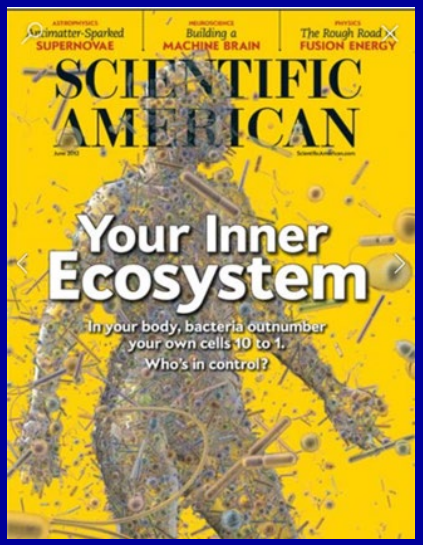
Probiotics: 100 years after Elie Metchnikoff's observation

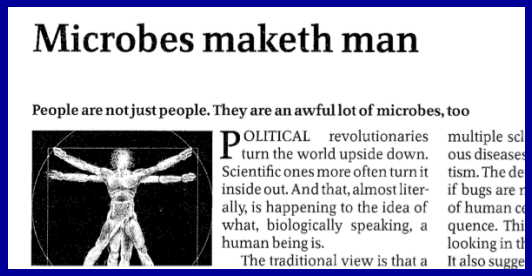
Human Microbiome Project (HMP



Genome Res. 2009;19:2317-2323







Microbes maketh man

People are not just people. They are an awful lot of microbes, too

POLITICAL revolutionaries turn the world upside down. Scientific ones more often turn it inside out. And that, almost literally, is happening to the idea of what, biologically speaking, a human being is.

The traditional view is that a

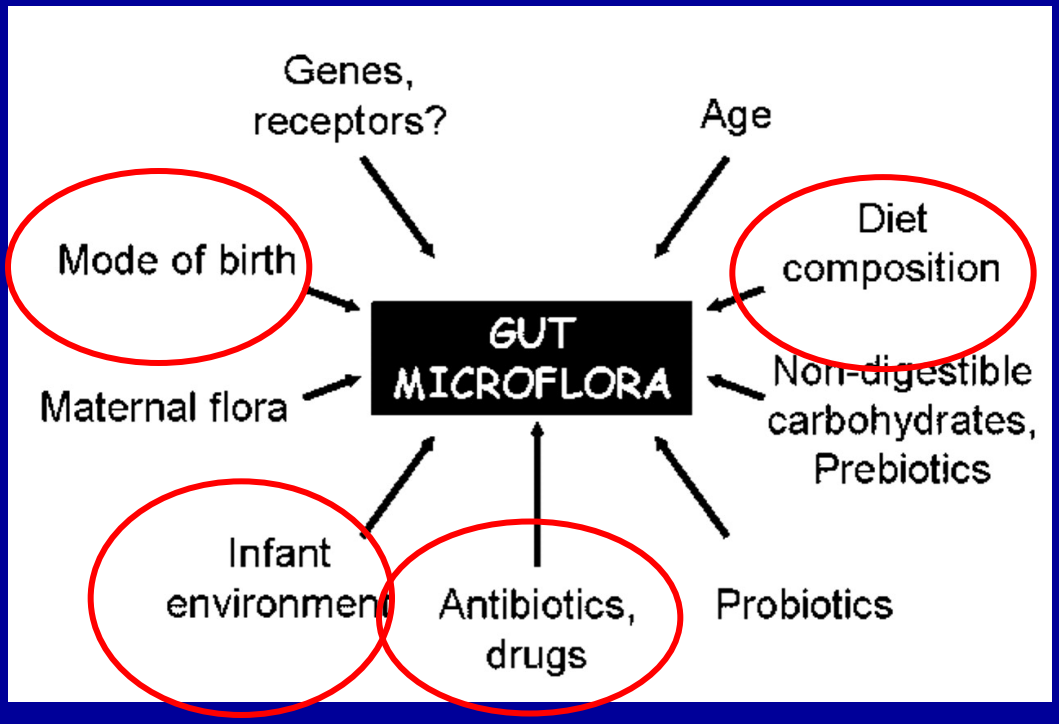
Causes of dysbiosis in premature infants



Dysbiosis is prevalent in premature infants

Premature infants is one of the populations that can benefit the most from restauration of microbiota

What is the Evidence?

Prevention of NEC with probiotics: a systematic review and meta-analysis.

Factors to consider when establishing the efficacy of probiotics administration include:

- accurate identification and labelling of strain used
- the viability of the organism
- consistency of product formulation over the course of the study

Probiotics and Preterm Infants: A Position Paper by the European Society for Paediatric Gastroenterology Hepatology and Nutrition Committee on Nutrition and the European Society for Paediatric Gastroenterology Hepatology and Nutrition Working Group for Probiotics and Prebiotics

Only products manufactured according to current good manufacturing practices should be used

van der Akker et al 2020

Use of Probiotics in Preterm Infants

Brenda Poindexter, MD, MS, FAAP, COMMITTEE ON FETUS AND NEWBORN

A pharmaceutical-grade probiotic product is not currently available in the United States. Long-term safety remains unknown

Current evidence does not support the routine, universal administration of probiotics to preterm infants, **particularly those with a birth weight of <1000 g.**

Poindexter B et al, Pediatrics AAP 2021

REGULATIONS

Dietary supplement

- Center for Food Safety and Applied Nutrition
- GRAS (Generally Recognized As Save)

Live Biotherapeutic (FDA)

- **A probiotic used to diagnosis, cure treat or prevent diseases is a drug and a biological product**

- The Center for Biologics Evaluation and Research regulates biological products when used for clinical indications (IND, US, 21CFR 312)

Most of the products currently available in the United States are categorized as dietary supplements and are not labeled with the number of CFUs for the probiotic strain

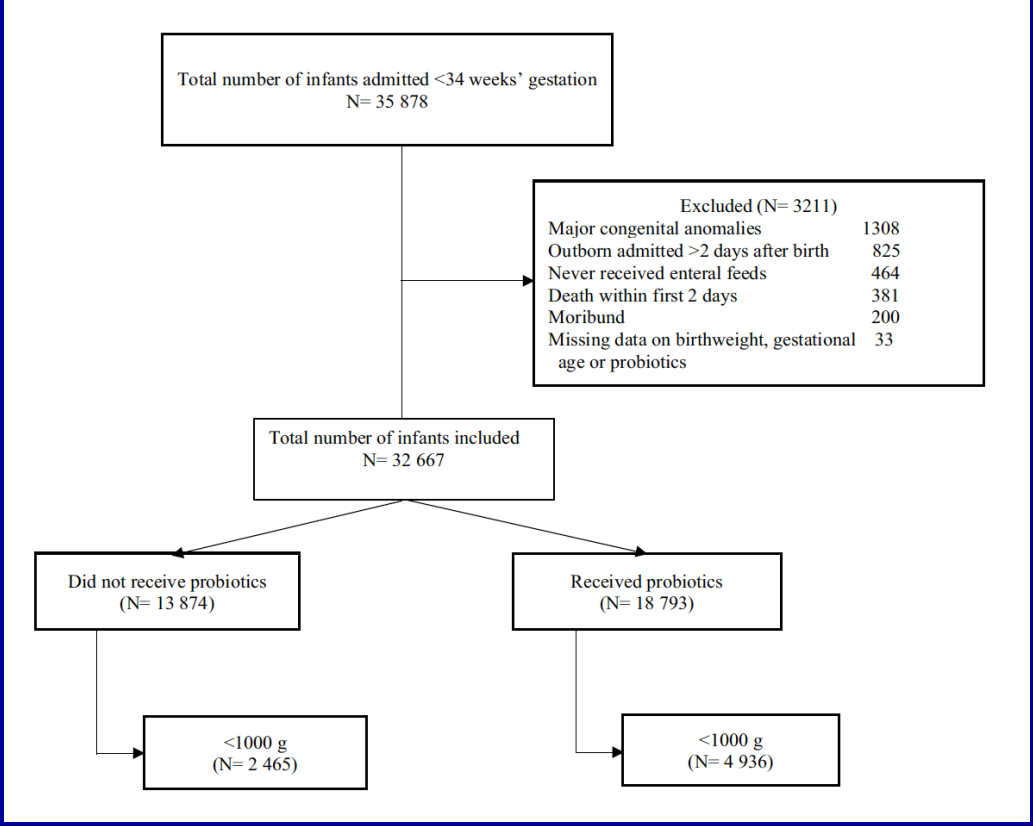
Dietary supplements (Probiotics) vs Biotherapeutic

Supplements: Considered safe until proven unsafe vs
Prescription Medicines: Considered unsafe until proven safe and effective

	Suplements	Biotherapeutic
FDA Classification	Dietary Supplements to Improve Health	Live Biotherapeutic Product
Proof of Safety	Not Required	Required
Proof of Effectiveness	Not Required	Required
Post-Marketing Surveillance	Not Required	Required
Good Manufacturing Practices (GMPs)	Food GMPs	Pharmaceutical GMPs
Reimbursable by Insurance	No	Yes
Disease Treatment Claims	Not Allowed	Allowed

Effectiveness and Risks of Probiotics in Preterm Infants

Alshaikh et al for the Canadian Neonatal Network .Pediatrics Feb 2025



- 4 Bifidobacterium strains (*Bifidobacterium breve, Bifidobacterium bifidum, Bifidobacterium longum sub sp, and Bifidobacterium neonateis*) and *Lactobacillus rhamnosus.*
- Single-strain probiotic *Lactobacillus reuteri.*

Effectiveness and Risks of Probiotics in Preterm Infants

Abbreviations: GA, gestational age; SNAP-II, Score for Neonatal Acute Physiology version II.

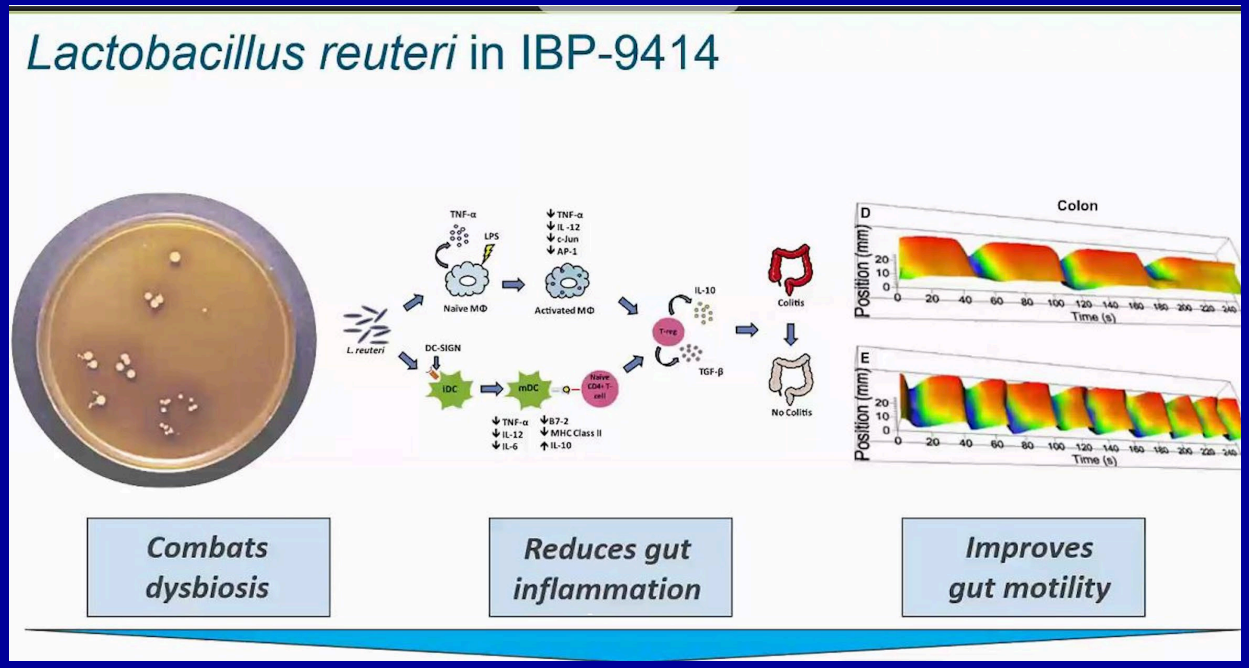
[a] Analysis is restricted to infants who received probiotics.

< 34 weeks: 27 infants had probiotic sepsis / 11 (41%) NEC or spontaneous intestinal perforation 7 days before or after probiotic sepsis

< 1000 g: 24 infants had probiotic sepsis / 9 (45%) had NEC or intestinal perforation 7 days before and after probiotic sepsis. 3 died within 7 days of probiotic sepsis

A randomized, double blind, parallel-group, placebo-controlled study to evaluate the efficacy and safety of IBP-9414 in premature infants 500-1500g birth weight in the prevention of necrotizing enterocolitis – The Connection study

Multicenter study in USA and Europe FDA and EMA regulated



Drug Product IBP-9414

Development of IBP-9414 as a live bacterial therapy for the prevention of NEC.

Under drug manufacture and regulations

IBP-9414 has been approved by the FDA for orphan drug designation for the prevention of NEC.

IBP-9414

- Freeze-dried powder for oral suspension
- Oral-enteral feeding
- Manufacturing process developed to allow opening of IND

A randomized, double blind, parallel-group, dose escalation placebo-controlled multicenter study to investigate the safety and tolerability of IBP-9414 administered to preterm infants

Primary Outcome

	Cohort A: Low dose (n=16)	Cohort A: Placebo (n=13)	Cohort B: High dose (n=16)	Cohort B: Placebo (n=14)	Cohort C: Low dose (n=14)	Cohort C: Placebo (n=16)	Cohort D: High dose (n=15)	Cohort D: Placebo (n=15)
Number of infants with Adverse Events (AEs)	9	11	10	6	13	12	14	14
Total number of AEs	29	30	51	24	51	48	64	58
Number infants with Serious Adverse Events (SAEs)	3	2	2	1	3	2	2	2
Total number of SAEs	6	3	2	3	5	4	2	4
Related AEs	0	0	1	0	3	2	0	2
Related SAEs	0	0	0	0	0	0	0	1
Number infants where AE led to Study Drug withdrawal	0	0	0	0	0	1	0	1
Death	0	0	0	0	0	0	0	0

Neu et al: Presented at Hot Topics 2017

A randomized, double blind, parallel-group, dose escalation placebo-controlled multicenter study to investigate the safety and tolerability of IBP-9414 administered to preterm infants

Fecal Analysis – Real Time qPCR Analysis

	Cohort A: Low dose	Cohort A: Placebo	Cohort B: High dose	Cohort B: Placebo	Cohort C: Low dose	Cohort C: Placebo	Cohort D: High dose	Cohort D: Placebo
Last day of study treatment	61623* (111110) (n=11)	6 (12) (n=10)	25764* (173111) (n=12)	3 (112) (n=10)	1423^{NS} (10269) (n=5)	7 (874) (n=10)	58251* (311599) (n=8)	40 (75) (n=12)
30 days after last dose	160 (760) (n=7)	297 (371) (n=5)	184 (6437) (n=3)	473 (513) (n=5)	40 (61) (n=9)	59 (184) (n=8)	40 (87) (n=12)	18 (35) (n=12)

*Median (Interquartile range) for bacterial counts per qPCR reaction. * P<0.001 vs placebo and ^{NS} not significant vs placebo.*

- Treatment with IBP-9414 leads to presence of bacterium in the feces on day of last dose: all IBP-treated, 31491 (121875) vs all placebo, 10 (91); P<0.001, Rank sum Wilcoxon
- Cross-contamination did not occur in placebo treated infants
- Smaller infants needed the higher dose to display IBP-9414 in the feces
- 30 days after last dose, the bacteria have been washed out: all IBP-treated, 63 (184) vs all placebo, 42 (290); NS, Rank sum Wilcoxon

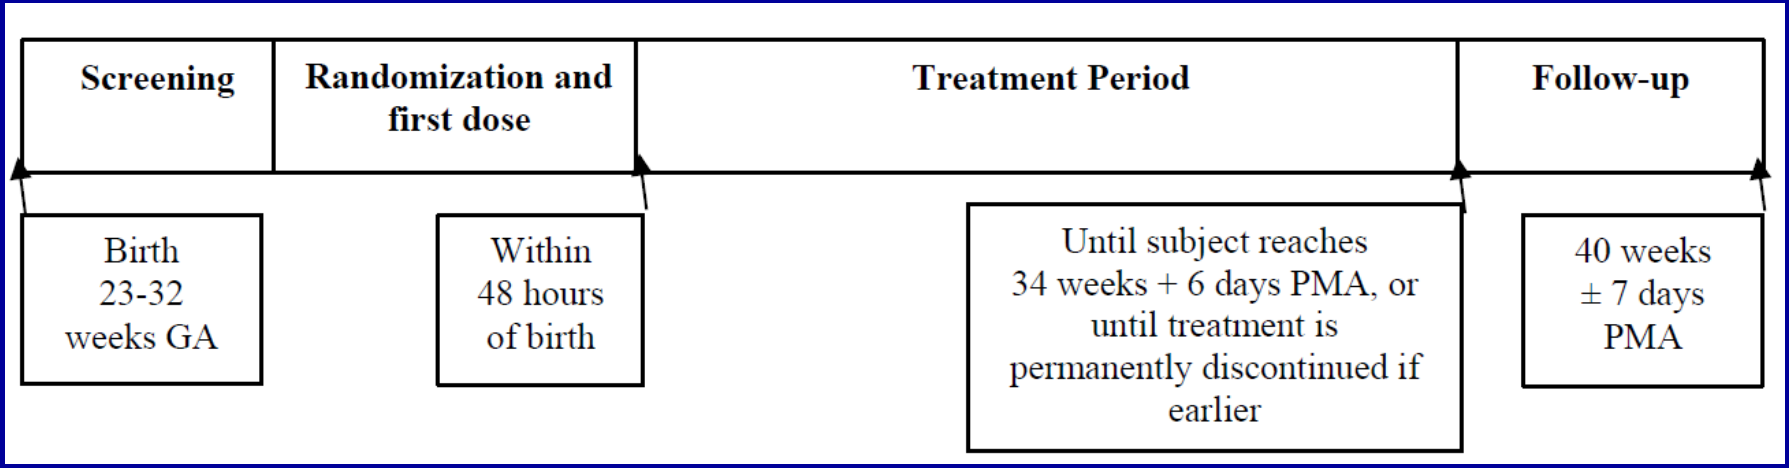
Neu et al: Presented at Hot Topics 2017

Primary efficacy endpoints

- Prevention of NEC
- Time to sustained feeding tolerance

Secondary endpoints,

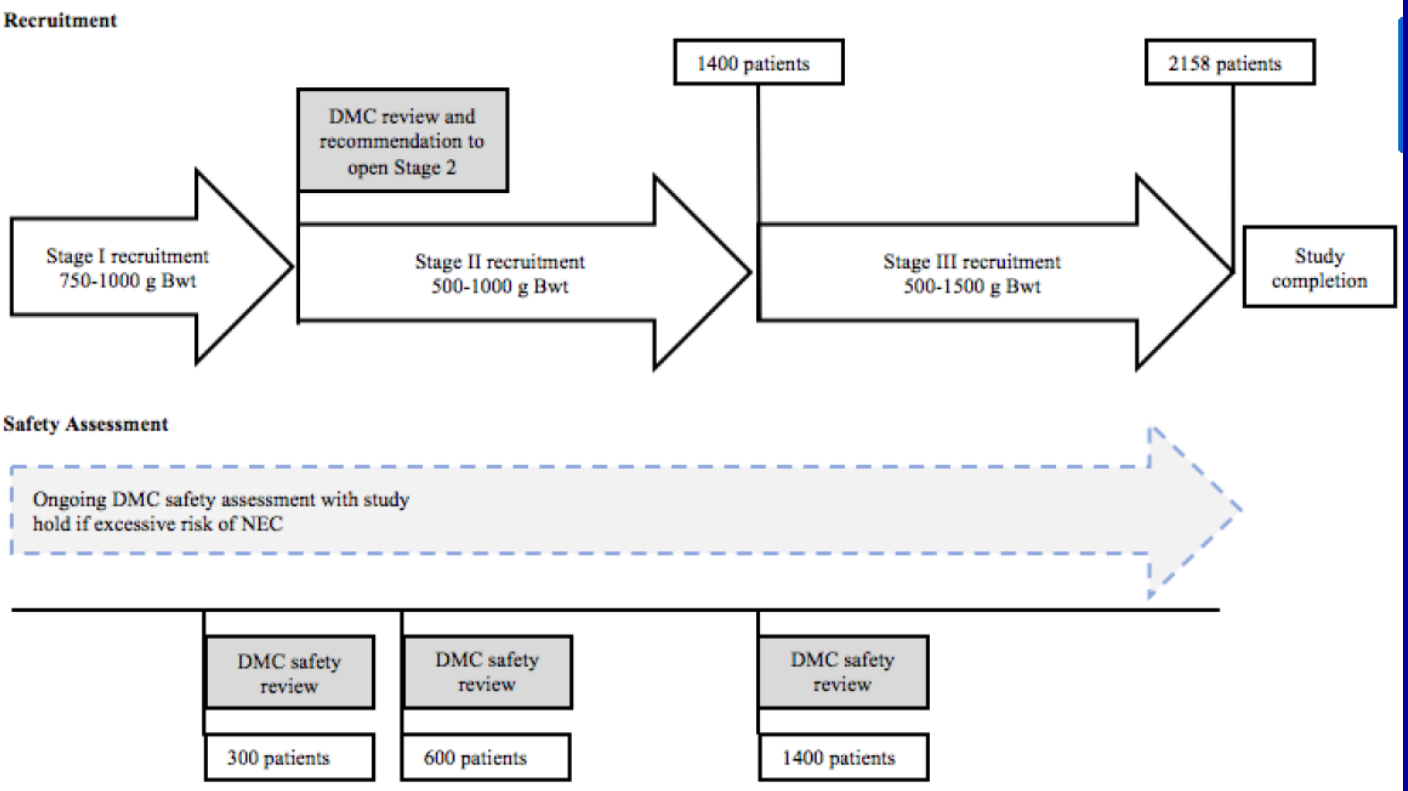
- NEC confirmed at laparotomy or autopsy,
- all-cause mortality,
- total weight gain,
- duration of hospitalization



J.Neu, et al ,submitted for publication

- Birth weight of 500-1500g
- Gestational age 23 weeks+0 days - 32 weeks+0 days at birth,
- ≤48 hours of age

Figure 4.1. Design of Phase 3 Efficacy and Safety Trial



J.Neu, et al ,submitted for publication

Effects of IBP-9414, a Live Biotherapeutic Product on necrotizing enterocolitis, time to full enteral feeding, and mortality in very low birth weight infants: Results from the "Connection Study

CONSORT diagram. Enrollment was conducted from July 2019-April 2024, with final follow-up in July 2024.

Apnea	4 (0.4)	12 (1.2)
Gastrointestinal disorders		
Necrotizing (entero)colitis	49 (4.5)	61 (5.9)
Intestinal perforation	18 (1.7)	26 (2.5)
Nervous system disorders		
Intraventricular hemorrhage	26 (2.4)	45 (4.4)
Congenital, familial, and genetic disorders		
Patent ductus arteriosus	19 (1.8)	18 (1.7)
Vascular disorders		
Hypotension	10 (0.9)	16 (1.5)

Probiotic supplement reduces risk of necrotizing enterocolitis and mortality in preterm very low-birth-weight infants: an updated meta-analysis of 20 randomized, controlled trial (Wang 2012)

Table 3 Summary of pooled RR with 95% CI in the subgroup analyses

Subgroup analyses	Studies (no. in probiotics group/no. in placebo group)	RR				
		RR (95%CI)	P_{RR}	$I^2_{Heterogeneity}$	$P_{Heterogeneity}$	Model
Bifidobacteria						
NEC	8 (509/467)	0.30 (0.16-0.58)	.0003	0	.64	Fixed
Mortality	3 (174/166)	0.74 (0.18-2.97)	.67	0	.51	Fixed
Sepsis	3 (174/166)	0.84 (0.29-2.41)	.74	0.21	.28	Fixed
Lactobacillus and Bifidobacteria						
NEC	6 (714/689)	0.33 (0.19-0.58)	.0001	0	.51	Fixed
Mortality	5 (653/660)	0.47 (0.26-0.87)	.02	49	.09	Random
Sepsis	5 (653/660)	0.90 (0.60-1.36)	.62	71	.007	Random
Lactobacillus						
NEC	4 (595/610)	0.37 (0.19-0.73)	.004	0	.40	Fixed
Mortality	4 (595/610)	0.61 (0.38-0.97)	.04	0	.88	Fixed
Sepsis	4 (595/610)	0.79 (0.46-1.36)	.40	71	.01	Random

$I^2_{Heterogeneity}$ indicates the I^2 value for heterogeneity analysis; $P_{Heterogeneity}$, the P value for heterogeneity analysis.

PROBIOTICOS IN PERINATOLOGY

- Research to investigate specific mechanisms of action
- Defining the strains or combination of strains that have clinical benefits
- Regulations that guarantee the product composition and safety
- Explore strategies on how to prevent dysbiosis in premature infant

Thank you

Picasso
